

5 Benefits of Oracle AI Database@Azure

Accelerate cloud migration with Oracle AI Database services running in Microsoft Azure. Quickly build and enhance applications with capabilities such as Oracle Database 26ai AI Vector Search and Azure AI services.

Build and enhance cloud native apps with Azure services

Ready to use Azure services, such as Azure Kubernetes, to augment and build apps in Oracle Autonomous AI Database? Learn how to incorporate NLP and GenAI capabilities into a converged database to quickly react to business demands.

Migrate workloads with ease

Easily migrate your workloads, experience the same high levels of Oracle Database performance, security, and availability as in Oracle Cloud Infrastructure (OCI), and benefit from unique optimizations for transaction processing, analytics, and mixed workloads.

Integrate management and operations

Purchase Oracle AI Database services through the Azure Marketplace using your Microsoft Azure Consumption Commitment and get one bill for Oracle AI Database and Azure services. Use your existing Oracle licenses and continue to accrue Oracle Support Rewards.

Gain immediate data insights

Migrate or create new data analytics apps in Azure to accelerate your business insights. Combine Azure analytics capabilities with the high performing and most scalable Oracle AI Database cloud services to gain immediate and actionable insights from your data.

Benefit from worldwide availability

Oracle services, including Oracle Exadata, are available in various global regions within Azure data centers for maximum deployment flexibility. Oracle AI Database@Azure is expanding globally to help meet customer demand, with 30+ live and planned regions.

CRITICAL INSIGHTS

“Microsoft Azure customers can now, with OCI systems running in Azure, collocate OCI-based Oracle Autonomous AI Database on Exadata with applications running on Azure, satisfying an unmet need for a substantial segment of Azure users.”

Devin Pratt, Research Director, Data Management Software, IDC
